What is ECM Data Imaging?

It's a service in which we provide accurate and complete imaging and analysis of data from Engine Control Modules (ECMs) and Heavy Vehicle Event Data Recorders (HVEDRs).

We provide ECM data imaging for businesses that don't have these capabilities in-house.

Which ECMs do you support for imaging or downloading?

We have the expertise and technology to download Detroit Diesel, Mercedes, Cummins, & Caterpillar ECMs.

We can read these modules on the accident-involved tractor or by way of a surrogate vehicle. We also perform "bench downloads."

How much does this service cost?

In most cases, we can perform the download and supply the data for less than \$2500. Often the cost is even lower.

We work to provide our services at rates that are affordable to small and mid-sized businesses and law enforcement.
