**Prompt notification is essential.**

Participation in this study is voluntary and contingent on providing signed consent.  
All information will be coded and sanitized so as not to  
identify individuals, accident scenes, or products.

UMTRI is requesting the cooperation of police and traffic accident personnel in identifying automotive crashes involving wheelchair-seated drivers and passengers of different types of motor vehicles. The purpose of this study is to conduct in-depth investigations of the conditions, circumstances, and factors involved in those events and the occupant injuries. These investigations will document details of the factors involved in the crash event of a wheelchair-seated occupant. Through these investigations it is expected to identify issues of occupant protection that may be unique to wheelchair-seated occupants and evaluate real-world feedback on the performance of wheelchairs.
